Abstract:

The closure of mines in an environmentally sustainable manner is a matter of concern throughout the country. The overarching principle of mine closure is also reflected in the United Nation's Sustainable Development Goals (SDGs), which India adopted in 2015. In India, mineral resource extraction has been laden with a bequest of large areas of unplanned mine closures and unreclaimed and derelict lands. Mining operations, in the earlier times and till recent past with deficient methods and irresponsible practices without regard to environmental protection and mine rehabilitation
